#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

Saturated and Unsaturated Solutions

Is there a limit to the amount of solute that will dissolve in a solvent?

Why?

We use solutions every day. People who wear contact lenses use "lens solution" to clean their contacts and keep them wet. Athletes who consume sports drinks after exercising benefit from the electrolytes in those solutions. This activity will explore whether or not there is a limit to how much of one substance can dissolve in another.

Model 1 – Saturated and Unsaturated Solutions

• All beakers contain 10.0 g of water.
• All beakers are kept at 20 °C.
• All solutions are stirred for 2 hours.
• Solute is the same substance in all beakers.

	Unsaturated Solutions	
	Beaker A	Beaker B
1.0 g of solute added		
Number of dissolved particles	5	10
Number of undissolved particles	0	0

	Saturated Solutions		
	Beaker C	Beaker D	Beaker E
3.0 g of solute added			
	15	17	18
	0	0	2
